### ■ Game Ready Equine

#### **Dry/Cold, Active Compression Combo**

The Game Ready Equine Back Wrap uses both dry/cold and active compression to help heal and prevent soft-tissue injuries in horses. It's designed to provide therapy from the withers to the lower back, and can be adjusted around the barrel, chest and lacing along the spine to fit both horses and large ponies.

The system consists of flexible wraps and a microprocessor-regulated control unit, which is filled with ice and water. After the appropriate wrap is secured firmly around the treatment area, one of four compression levels and a temperature range are selected and set on the internal timer.
